

Alok Urmaliya

Product Engineer | Full-Stack (Python/Django, React) | Data & Automation

+91 7089353896 | alokurmaliya0123@gmail.com | github.com/alok-urmaliya

Professional Summary

Full-stack engineer (3+ years) who ships production features end to end and works backward from a metric to root cause before writing code. Track record of finding the bottleneck in a system, a slow query, a manual process, a broken workflow, deciding quickly whether it needs a fix, an automation, or a new tool, then building and measuring it. Comfortable across Python/Django, React/TypeScript, SQL, and AWS.

Experience

The Hotspring Pvt. Ltd.

Dec 2023 – Aug 2026

Junior Full-Stack Developer (joined as Intern)

Python • Django • PostgreSQL • Celery • Redis • GraphQL • AWS • React

- Traced a response-time issue in high-traffic GraphQL resolvers to inefficient PostgreSQL queries via profiling, then rewrote them to cut response times by up to 80%.
- Built Celery/Redis asynchronous data-processing pipelines that replaced manual media-processing and notification steps, removing repetitive work from the production pipeline.
- Designed Python/Django backend services, PostgreSQL data models, and GraphQL APIs and mutations, shipping complete production-ready features rather than isolated tickets.
- Owned features end to end on a VFX workflow platform used by studios worldwide: scoped the problem with product, design and stakeholders, built it, shipped it, and monitored it in production.
- Shipped React/TypeScript features across 20+ screens driven by real user workflow pain points, improving day-to-day usage for 500+ users.
- Resolved production issues spanning frontend, backend, database, and async layers by working backward from the metric or error to the root cause.
- Mentored interns on decomposing ambiguous problems into shippable solutions.

Sumati

Mar 2023 – Dec 2023

Full-Stack Developer

Python • C# • ASP.NET Core • REST • AWS • React • TypeScript

- Built automated document-processing workflows on AWS S3 and Lambda that extract, transform, and load document data without manual handling, with React components on the frontend.
- Developed REST APIs using ASP.NET Core for client applications and integrated backend services with React frontends.
- Implemented SAML-based SSO authentication for enterprise client integrations, navigating client-specific auth requirements.

Projects

Email-to-Dynamo

Serverless ETL Pipeline for Email Data

C# • ASP.NET • AWS API Gateway • DynamoDB • Apps Script

- Built to eliminate a recurring manual data-entry task: a serverless AWS ETL pipeline that extracts, structures, and loads data from emails automatically.
- Integrated Google Apps Script, API Gateway, and DynamoDB to run scheduled batch data processing with zero manual intervention.

TaskForge

Full-Stack Collaboration Platform

Python • Django • PostgreSQL • GraphQL • React • WebSockets

- Built a project management platform end to end (RBAC, GraphQL APIs, real-time collaboration, transactional backend operations) as a self-directed 0-to-1 build.
- Designed the relational schema and optimized queries with Django ORM and PostgreSQL, including persistent task ordering.
- Designed real-time communication using Django Channels and WebSockets.

Skills

Languages: Python, SQL, TypeScript, JavaScript, C#

Backend & APIs: FastAPI, Django, NodeJS, Django REST Framework, Graphene (GraphQL), REST APIs, Django Channels, Pytest, OAuth, JWT Authentication, Authorization

Data Engineering: SQL, PostgreSQL (query optimization, profiling, data modeling), MongoDB, Celery & Redis async/batch processing, DynamoDB, AWS Lambda

Frontend: React, Tailwind CSS, Vite, Figma

Cloud & Tools: AWS (S3, RDS, EC2, Lambda, API Gateway, CloudWatch), Docker, CI/CD, Git, Github, Linux, Sentry

Other: FFmpeg, OpenImageIO, Blender scripting

Education

Global Engineering College Jabalpur

B.Tech in Information Technology

CGPA: 8.32/10
